OIL & FUEL SAMPLING

Oil sampling can give you the knowledge to safely extend your fleet's oil drain intervals and diagnose engine issues before they cause excessive damage, saving you money.

From our own dedicated state of the art laboratory, we can provide sampling and analysis services on your fuel and oil condition.

- **Viscosity:** Crucial for optimum lubrication to maximize performance.
- **Additive level:** Additive levels become depleted over time as they fulfil their purpose.
- **Contamination:** Oil can become contaminated by environmental factors, as well as by other oils.
- **Wear metals:** Wear metals in the oil offer an insight into not just the health of the oil but the health of the machine components.
